

Editorial

Dear reader,

Welcome to the c't special issue on Windows! We have dedicated this year's issue to the topic of "Projects" - More precisely: c't projects relating to Windows that will help you in all kinds of situations.

These include, for example, c't-WIMage, which is not only ideal for back-ups, but also helps you to move Windows to a new computer. At the same time, the c't-KeyFinder helps you to get your license key. And the absolute classic is not missing either: the kit for c't emergency Windows, now in the 2024 version. You can use it to build your own rescue system for all kinds of emergencies, whether for data recovery, virus attacks, a broken boot loader or even suspected hardware faults.

Also in this issue: How to use the tools included in Windows to keep out malware and other unwanted software, everything you need to know about driver installations as well as tips and tricks on BitLocker drive encryption, the Microsoft account and the amazingly versatile calculator app.

Enjoy reading!
